DETAILED ACTION

1. Applicant's response to the Restriction requirement and election of Group I, claims 1-5, 6-8, 10-13 and 15-17, with traverse filed on July 26, 2002 is acknowledged. Claims 9, 14, 18-20 and 28-34 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being to a non-elected invention. The traversal is on the grounds that Groups I-VII relate to a single general inventive concept. Applicant urges that Group I is not anticipated by Tabatabai et al because the composition does not teach a dimeric type bacterial Cu,Zn-SODs. Claim 1 is drawn to a pharmaceutical composition for vaccination comprising a bacterial Cu,Zn superoxide dismutase (Cu,Zn-SOD) of the dimeric type or fragment, variant or derivative of the Cu,Zn-SOD wherein antibodies raised against said fragment, variant or derivative also bind intact full length Cu,Zn-SOD or a nucleic acid coding for the Cu,Zn-SOD fragment, variant or derivative and a pharmaceutically acceptable carrier. Upon further consideration, the Examiner agrees with the Applicant in their assertion that Tabatabai et al does not disclose a dimeric type bacterial Cu,Zn superoxide dismutase. Therefore a new lack of unity is set forth as follows:

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Election/Restrictions

- Group I Claims 1-5, 6-8, 10-13 and 15-17 are drawn to a pharmaceutical composition and vaccine comprising a bacterial Cu,Zn-superoxide dismutase or fragments, derivatives or variants thereof.
- Group II Claims 1-5 and 6-8 are drawn to a pharmaceutical composition and vaccine comprising a nucleic acid that encodes a bacterial Cu,Zn-superoxide dismutase or fragments, derivatives or variants thereof.
- Group III Claim 9 is drawn to a method of preparing a pharmaceutical composition comprising isolating a gene for a bacterial Cu,Zn-superoxide dismutase or fragments, derivatives or variants thereof.
- Group IV Claims 10 and 13-14 are drawn to a pharmaceutical composition comprising an antibody to a bacterial Cu,Zn-superoxide dismutase or fragments, derivatives or variants thereof.
- Group V Claims 18-20 and 31-33 are drawn to a method of treating an individual with a bacterial infection comprising administering bacterial Cu,Zn-superoxide dismutase or fragments, derivatives or variants thereof.
- Group VI Claims 28-29 and 34 are drawn to a method of treating an individual with a bacterial infection comprising administering an antibody specific to a bacterial Cu,Zn-superoxide.

Art Unit: 1645

Group VII Claim 30 is drawn to a method of treating an individual with a bacterial infection comprising administering a nucleic acid encoding a bacterial Cu,Zn-superoxide.

3. The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I lacks novelty under PCT Article 33(2) as being anticipated by Beaman et al (*Infection and Immunity, September 1990, p. 3122-3128*). Beaman et al teach that mice were injected intraperitoneally with nocardial SOD suspended in Freund's incomplete adjuvant (page 3122, 2nd column). Beaman et al teach monoclonal antibodies raised against the nocardial SOD and Beaman et al teach that the monoclonal antibodies (i.e. MAb1 and Mab2) reacted with SOD in immunoblots (page 3125, 1st column). Group I is the main invention in this application and it lacks novelty, therefore the other claims are not so linked by a special technical feature within the meaning of PCT Rule 13.2 so as to form a single inventive concept.
